Factoring Quadratics - Math is Fun

In number theory, integer factorization is the decomposition of a composite number into a product of smaller integers. If these integers are further restricted to prime numbers, the process is called prime factorization.. When the numbers are sufficiently large, no efficient, non-quantum integer factorization algorithm is known. An effort by several researchers, concluded in 2009, to factor a ...

where the s are the prime factors, each of order s . Each factor is called a primary. Prime factorization can be performed in the Wolfram Language using the command `FactorInteger[n]`, which returns a list of pairs. Through his invention of the Pratt certificate, Pratt (1975) became the first to establish that prime factorization lies in the complexity class NP.
