I have 2 worksheets: Summary and SERVER-ONE. In cell A5 on the Summary worksheet, I have added the value SERVER-ONE.. Next to it, in cell B5, I would like a formula that uses the value in A5 to display the value of G7 in the worksheet of the same name (SERVER-ONE).. I could manually use: ='SERVER-ONE'!G7 However I would like this to be dynamic, so I can easily add more worksheets.

Use string value from a cell to access worksheet of same name

Alternatively, you can solve the "optional" decimal point problem using the following solution:
Number Format: General;[Red](General) This will add the decimal place and fractional value accordingly, while formatting negative numbers in a more legible way.

worksheet function - Format a number with optional decimal ...

An array formula (one that spans multiple cells) can do calculations on rows and columns of cells where you might otherwise need to use several formulas. For example, you can count the number of characters that are contained in a range of cells, sum only numbers that meet certain conditions (such as the lowest values in a range or numbers that fall between an upper and lower boundary), and sum ...

What we now refer to as Direct messaging exchange, or just Direct exchange, is the product of a set of specifications and protocols, together known as the Direct standard. The Direct standard was developed by a public-private collaboration called the Direct Project, sponsored by the Office of the National Coordinator for Health IT (ONC), starting in 2010.
