Syntactic Structures is a major work in linguistics by American linguist Noam Chomsky. It was first published in 1957. It introduced the idea of transformational generative grammar. This approach to syntax (the study of sentence structures) was fully formal (based on symbols and rules). At its base, this method uses phrase structure rules. These rules break down sentences into smaller parts ...

Compressors and blowers installed in chemical plants can efficiently transport and pressurize fluids as well as transfer power. Their classification by type is shown in Table 5.1. This chapter describes the flow oscillations (pressure pulsations) in piping and the vibration of piping caused by suction/discharge flows in such fluid machinery.

Direct-field acoustic testing, or DFAT, is a technique used for acoustic testing of aerospace structures by subjecting them to sound waves created by an array of acoustic drivers. The method uses electro-dynamic acoustic speakers, arranged around the test article to provide a uniform, well-controlled, direct sound field at the surface of the unit under test.
